

Intermittent fasting: Polish vs Czech Wikipedia

Wikipedia pageviews (agent=user), views per million project views · 2024-09..2026-08 · generated 2026-09-23 16:44 UTC

topic	lang	title	pm latest	pm year ago	YoY %	growth %/yr*	spikes %	coverage %	confidence
intermittent fasting	cs	Přerušovaný půst	2.06	4.5	-47.69	-37.96	0	100	high

Wikipedia interest, views per million project views · 2024-09..2026-08 · agent=user

Ranking: 1. intermittent fasting|cs (-37.96)

Recommendation

Czech readers show 2.1 views per million in the last three months vs 4.5 a year earlier: interest is declining at −38 %/yr with high confidence (no spikes, full coverage). Polish Wikipedia has no article on the topic, so there is no signal for Poland; the search candidates (oxidative stress, therapeutic fasting) are different topics and were not used.

- Do not treat Poland as 'no interest': check Polish-language search or social data instead.
- If a Polish article appears, re-run with --titles pl=<title>.

Assumptions: Pageviews filtered to agent=user (human traffic as classified by Wikimedia) and all access methods. Interest is measured as views per million of the whole language edition's views in the same period. The current (incomplete) month is excluded. Growth figures are annualized log-linear trends with spike periods clipped (see references/methodology.md).
Limitations: Wikipedia interest is not willingness to pay; validate promising directions with real user research. Views depend on article existence and quality; a missing or poor article hides real interest. Bot filtering is imperfect; spikes can be automated traffic or news events. A language edition is not a country: readers of one language live in many markets. pl: no article for 'intermittent fasting'; search suggests Stres oksydacyjny, Głodówka lecznicza, Paleolityczny styl życia — pass --titles pl=<title> only if one of them is the same topic.
